

IOCAP RELEASE NOTES

Version 2.5.0.0

October 2025

WHAT'S NEW IN IOCAP V2.5.0.0

This latest release of IOCAP does not contain any new developments, but we fixed a few small bugs that some users may have come across.

LIBRARY UPGRADES

Microsoft has announced the end-of-life for several of its products and libraries — most notably Bing Maps, which IOCAP previously used for displaying online maps. This system has now been replaced with the latest Azure Maps platform, offering smoother performance and richer, more detailed map content than before.

BUG FIXES

1. **Roaming Receiver Prediction.** Under certain conditions and screen resolutions, users may have experienced that the results page displays a large orange cross instead of the results table.
2. **Roaming Receiver Prediction Chart Preview.** On some screen dimensions users may have experienced an incorrect offset of columns that caused the data to appear unorganized.
3. **Rendering Anomaly.** On some older monitors users reported the map switching to a fuzzy, black-and-white look. The screen rendering algorithms were extended and the map now renders correctly, even on older monitors.
4. **Minor Fixes.** Minor reported anomalies were fixed.

NOTE: If you receive a message stating that the update file was not successfully downloaded after selecting the **Update** option in the **Help** tab, please disregard it. The file **has** been downloaded and can be found in your **Downloads** folder.
